

Assignment 1: INGESTION PIPELINE USING LANGFLOW

Step 1: Add a Read File component that takes in the test case sheet as an input

Step 2: The output of the Read File component is sent as an input to the Ingest Data parameter of the MongoDB Atlas component

Step 3: A Mistral embedding component is added, where the output of the embedding component is sent as input to the Embedding Parameter of the MongoDB Atlas component

The resulting workflow will look something like this

Upon executing the above workflow, the data is ingested into the collection named in the MongoDB Atlas component.

In the image below we can see that the data ingested through the MongoDB Atlas component is ingested into the collection name specified in the Langflow pipeline

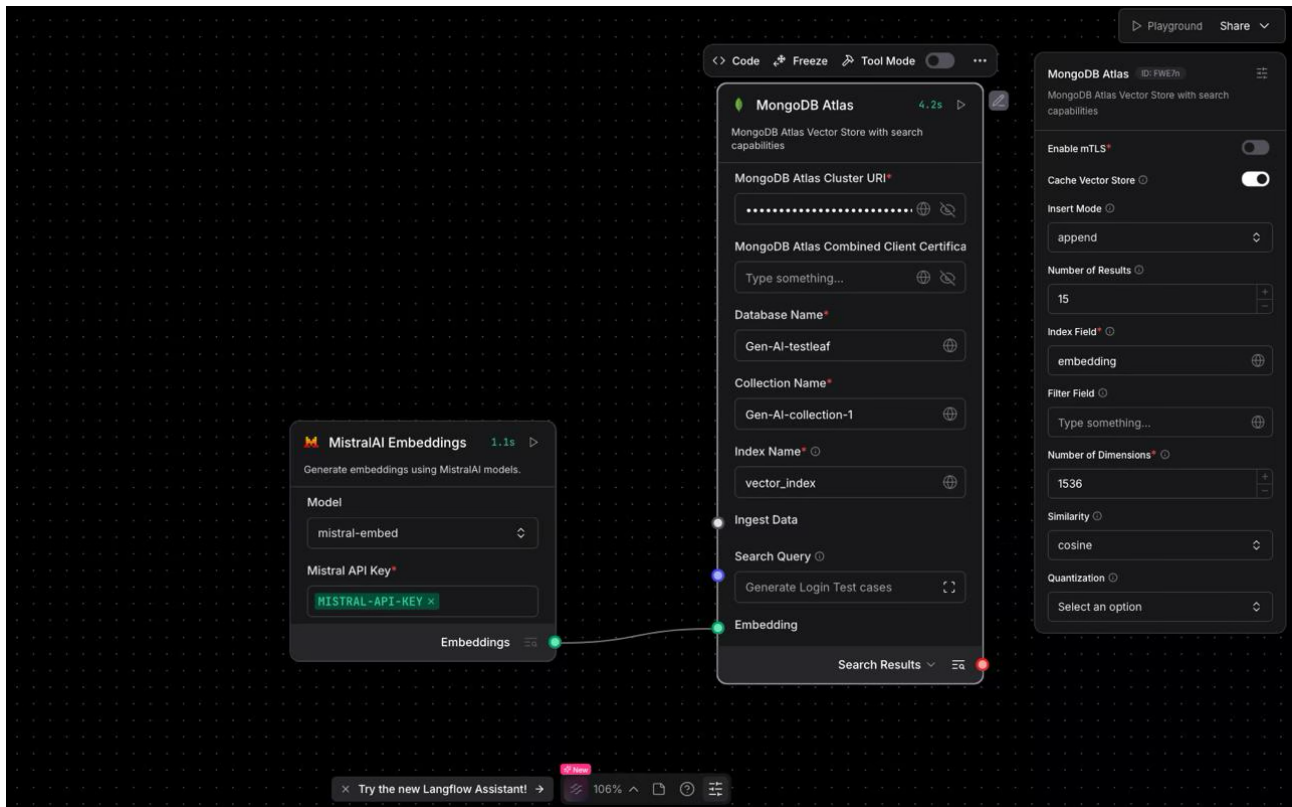

The screenshot shows the MongoDB Atlas Data Explorer interface. The left sidebar displays the 'Data Explorer' with a tree view of the database structure. The main panel shows the 'Gen-AI-collection-1' collection with 500 documents. The 'Documents' tab is selected, displaying a table of data. The table has columns: _id, ObjectId, text String, embedding Array, module String, testCaseId String, and prerequisite. The data is ingested into the collection named 'Gen-AI-collection-1'.

	_id	ObjectId	text String	embedding Array	module String	testCaseId String	prerequisite
1	ObjectId('6a5c5b2cca108e...		"Verify Normal registrat...	[] 1024 elements	"Registration"	"TC_001"	"Counter shi
2	ObjectId('6a5c5b2cca108e...		"Verify Baby of Registra...	[] 1024 elements	"Registration"	"TC_002"	"Valid Mothe
3	ObjectId('6a5c5b2cca108e...		"Verify PRN Registration"	[] 1024 elements	"Registration"	"TC_003"	NaN
4	ObjectId('6a5c5b2cca108e...		"Verify PRN Registration"	[] 1024 elements	"Registration"	"TC_004"	"Valid UHID
5	ObjectId('6a5c5b2cca108e...		"Verify Update details"	[] 1024 elements	"Registration"	"TC_005"	"PRN/ERN Num
6	ObjectId('6a5c5b2cca108e...		"Verify OLD to New UHID ...	[] 1024 elements	"Registration"	"TC_006"	"Valid old U
7	ObjectId('6a5c5b2cca108e...		"Verify "Patient Search"	[] 1024 elements	"Registration"	"TC_007"	"Valid UHID
8	ObjectId('6a5c5b2cca108e...		"Verify OP Search Functi...	[] 1024 elements	"Registration"	"TC_008"	"Valid From
9	ObjectId('6a5c5b2cca108e...		"Verify "Regularization ...	[] 1024 elements	"Registration"	"TC_009"	"Valid UHID
10	ObjectId('6a5c5b2cca108e...		"Verify "Corporate Regis...	[] 1024 elements	"Registration"	"TC_010"	"Employee ID

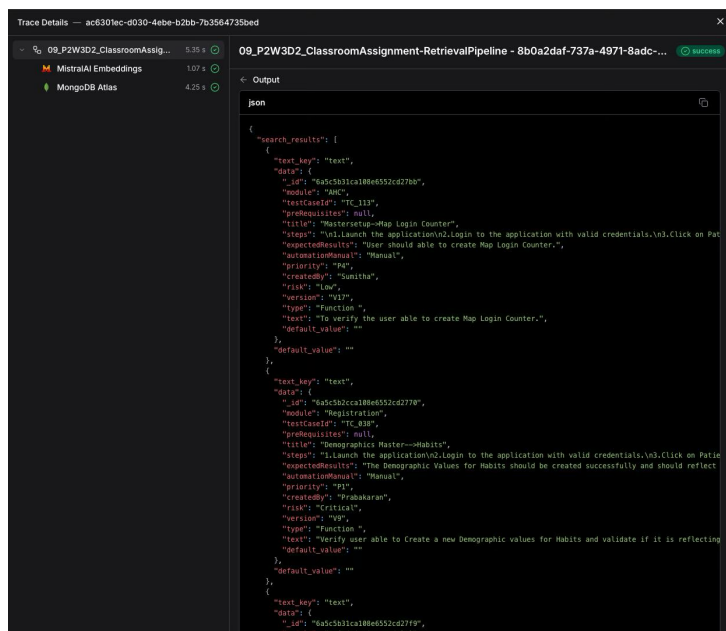

Assignment 2: RETRIEVAL PIPELINE USING LANGFLOW

Step 1: A Mistral embedding component is added, where the output of the embedding component is sent as input to the Embedding Parameter of the MongoDB Atlas component

Step 2: The pipeline is executed with a value of 15 set for the Number of Results parameter

Step 3: A total of 15 test cases are fetched by the Langflow pipeline from the collection defined in the MongoDB Atlas component
